

WOOD FIBER

100% WOOD
HYDRAULIC MULCH

100% WOOD FIBER HYDRAULIC MULCH

Modern manufacturing technology pre-steam the chips in a pressurized vessel, this softens the wood chips, allowing for maximum separating of the wood fibers. Refining in a pressurized system yields more fibers per pound, while maintaining the Integrity, Strength, and Length of the fibers.

100% Wood Fiber has the maximum coverage on the ground, moisture retention, and holding power than other Hydroseeding mulches. 100% Wood Fiber enhances seed germination and vegetation establishment.

HH Wood Fiber recycles only clean, virgin wood chips to produce the highest quality fiber in the Erosion Control Industry, never contaminating the fiber with sawdust, construction, or pallet waste.

HH Wood Fiber strives to provide Quality products developed with Integrity for both the environment and our clients, delivered with unsurpassed Customer Service.

- **Clean Virgin Wood Chips**
- **Cutting Edge Manufacturing Technology**
- **Maximum Coverage**

100% Wood Fiber

Composition: Wood Fiber & Surfactant

Moisture Content: (+/-) 12%

Color: Brilliant Green

Application Rate: 2,000lbs. per acre (flat), 2,500lbs. per acre (moderate slopes)

Mixing Ratio: 50lbs. (one bale) per 100 gallons of water

Packaging: 50lb. bales/40 per pallet/880 per truckload

WOOD FIBER

Clean Virgin Wood Chips

HH Wood Fiber recycles only clean, virgin wood chips to produce the highest quality fiber in the Erosion Control Industry. We do not contaminate our fiber with construction or pallet waste.

Cutting Edge Manufacturing Technology

Modern manufacturing technology pre-steamers the chips in a pressurized vessel. This softens the wood chips, allowing for maximum separating of the wood fibers. Refining in a pressurized system yields more fibers per pound while maintaining the Integrity, Strength, and Length of the fibers.

Maximum Coverage

More long fibers per pound result in maximum coverage on the ground, moisture retention, and holding power. The long, hairlike fibers interlock to form a strong matrix, providing 100% coverage to the contour of the soil at proper application rates. Upgrade your erosion control performance and functional longevity to meet the specific needs of your site with the HH Wood Fiber comprehensive line of high-performance mulches.

Industry Experience

For the last 25 years, Hydroseeding and Erosion Control is all the HH Wood Fiber Management team has done. We understand the equipment and all the fiber mulch technology utilized in our formulations.

Integrity & Customer Service

HH Wood Fiber is committed to whatever is necessary to service our customers. Treating you professionally and conducting business with integrity is a founding principle of our company.
