

WOOD FIBER

WOOD
WITH TACKIFIER

100% WOOD FIBER WITH TACKIFIER

100% Wood Fiber with Tackifier is the combination of 100% wood with the strongest tackifier in the industry. Wood with Tackifier sprays smooth and applies evenly each load. Each bale is calibrated with specialized equipment to add the precise amount of tackifier to every bale, so that you don't have to! 100% Wood with Tack assures consistency in every tank load sprayed.

The ease of mixing along with increased viscosity and functional longevity to insure successful projects in commercial, residential, and industrial applications.

HH Wood Fiber strives to provide Quality products developed with Integrity for both the environment and our clients, delivered with unsurpassed Customer Service.

- **Clean Virgin Wood Chips**
- **Cutting Edge Manufacturing Technology**
- **Maximum Coverage**

100% Wood Fiber with Tackifier

Composition: Wood Fiber, Surfactant & Tackifier

Moisture Content: (+/-) 12%

Color: Brilliant Green

Application Rate: 2,000lbs. per acre (flat), 2,500lbs. per acre (slopes up to 3:1)

Mixing Ratio: 50lbs. (one bale) per 100 gallons of water

Packaging: 50lb. bales/40 per pallet/880 per truckload

WOOD FIBER

Clean Virgin Wood Chips

HH Wood Fiber recycles only clean, virgin wood chips to produce the highest quality fiber in the Erosion Control Industry. We do not contaminate our fiber with construction or pallet waste.

Cutting Edge Manufacturing Technology

Modern manufacturing technology pre-steamers the chips in a pressurized vessel. This softens the wood chips, allowing for maximum separating of the wood fibers. Refining in a pressurized system yields more fibers per pound while maintaining the Integrity, Strength, and Length of the fibers.

Maximum Coverage

More long fibers per pound result in maximum coverage on the ground, moisture retention, and holding power. The long, hairlike fibers interlock to form a strong matrix, providing 100% coverage to the contour of the soil at proper application rates. Upgrade your erosion control performance and functional longevity to meet the specific needs of your site with the HH Wood Fiber comprehensive line of high-performance mulches.

Industry Experience

For the last 25 years, Hydroseeding and Erosion Control is all the HH Wood Fiber Management team has done. We understand the equipment and all the fiber mulch technology utilized in our formulations.

Integrity & Customer Service

HH Wood Fiber is committed to whatever is necessary to service our customers. Treating you professionally and conducting business with integrity is a founding principle of our company.
